

For Immediate Release

ComputerEase Construction Software Named to “Constructech 50” List for the Second Straight Year

A large customer base and development of innovative mobile computing solutions positions ComputerEase as a technology leader within the construction industry.

CINCINNATI, Ohio, July 21, 2010: ComputerEase Software, Inc., a leading provider of construction accounting, project management and remote field-to-office software, today announced that it has been named one of the Constructech 50 for 2010. This respected list, which features the 50 most influential technology providers in the construction industry, is determined by the editors of Constructech magazine and published in the annual Constructech IT Playbook. This is the second consecutive year that ComputerEase has been included on the list.

Several criteria were used when evaluating Constructech 50 candidates, including product strength, customer satisfaction and company growth. With over 6,000 customers across the U.S. and a commitment to developing innovative construction software that is also easy to use, ComputerEase clearly demonstrates the qualities required to achieve Constructech 50 status. “We’re pleased to be recognized by Constructech as a construction technology leader,” said ComputerEase President, John Meibers. “Our formula for success is simple, yet powerful. After working closely with our clients to understand their needs, we deliver solutions that help their businesses become more efficient and profitable.”

Companies offering wireless and mobile products performed particularly well on this year’s list due to the increasing demand for these “hot” technology tools. Meibers credits the company’s FieldEase suite of mobile computing solutions and its Electronic Document Processing system for helping ComputerEase stand out from the competition.

“Serving a large number of contractors in the industry, the team at ComputerEase continues to build on its line of products,” the Constructech editors stated. “A top priority for the software provider is focusing on the needs of its customers, which is why ComputerEase has continued to invest in new features and remote processing, keeping the company in line with some of the recent mobile trends in the industry.”

About ComputerEase

Founded in 1983, ComputerEase develops integrated construction accounting and project management software that helps contractors solve problems and increase profits. The scalable, modular structure of ComputerEase makes it the ideal fit for companies of all sizes and specialties. In addition to accounting and job costing, ComputerEase offers robust equipment, purchasing, service and electronic document management solutions. ComputerEase takes great pride in providing a matchless level of customer support. To accomplish this, the company has put industry professionals in key positions: 100% of the ComputerEase support, training and implementation staff has construction experience. More than 6,000 contractors across the U.S. use ComputerEase to streamline their operations and increase profits.
