

ProEst Estimating Partners with ComputerEase Accounting to Create an Integrated Construction Software Suite

Seamless integration transfers ProEst Estimating data to the ComputerEase accounting program to automate job setup, increase efficiencies and eliminate duplicate data entry.

SAN DIEGO, Calif., October 11, 2009: Construction Management Software (CMS), a leading provider of construction estimating and digital takeoff solutions, today announced that it has formalized an advanced integration partnership with ComputerEase Software, Inc. Although the two companies have been technology partners since April 2000, recent interface enhancements have created a more seamless link between CMS' ProEst Estimating software and the ComputerEase construction accounting system. The enhancements allow the two programs to function as an integrated software suite.

ProEst Estimating, with integrated digital takeoff technology, is used by construction company estimators to quickly and accurately calculate the cost of any size project. Now, a single mouse click transfers valuable estimate data from ProEst to ComputerEase to automatically set up a job – complete with budget, phases, categories, cost types and labor hours – in the accounting program. A second mouse click transfers material data from ProEst to ComputerEase to automatically create purchase orders or inventory pick-lists. This advanced integration increases efficiency and eliminates the errors commonly associated with duplicate data entry.

“We are excited to strengthen our partnership with CMS, who shares our commitment to continuously improving the products and services we deliver to the construction industry,” said ComputerEase President, John Meibers. “By optimizing the interface between ComputerEase and ProEst, we have given our mutual clients easier access to a powerful suite of integrated tools for managing all areas of their operations, from estimating and takeoffs to accounting and project management.”

ComputerEase clients that also own ProEst can quickly launch the estimating software simply by clicking a button in their accounting program. ComputerEase clients that do not own ProEst can download a free trial of the estimating software at <http://www.proest.com/computerease>.

ABOUT CONSTRUCTION MANAGEMENT SOFTWARE (CMS)

CMS is the developer of ProEst estimating software and ProEst Takeoff software, simple, powerful and innovative estimating solutions for construction. An industry leader since 1976, CMS' software is used by more than 6,500 construction firms nationwide. Headquartered in San Diego, CA, CMS is committed to streamlining and improving the estimating process by continuously enhancing its products to deliver the latest advances in technology. Digital takeoff technology, a Microsoft Office 2003 look and feel and seamless integration with popular software programs are just some examples.
